

Invest in Research

The life saving discoveries made in research every year cannot be made without ongoing support from the public, patients and the government. The support is as important as the breakthroughs in this research. Please join us in supporting these breakthroughs.

You Can Support Research

To support the PART and their research program please contact **British Columbia Children's Hospital Foundation:**

The Team

The Pediatric Anesthesia Research Team (PART) is a group of researchers who are always looking for innovative ways to be more safe and effective. PART includes:

- Anesthesiologists
- Researchers
- Engineers
- Psychologists
- Students
- Surgeons
- Nurses
- Hospital staff

PART has projects covering a wide range of pediatric research including:

- basic science research done in the lab
- clinical research done at the bedside with children and families in our hospital
- everything in between

You Can Participate

PART does many studies based on questions raised by the doctors and nurses on our research team. If your child is having anesthesia for a surgery or a procedure, he/she may be eligible to be included in one of these studies. Your participation is voluntary. All parts of the study will be described to you before surgery. We will answer any questions that you have. All studies have been approved by the Research Ethics Board.

Our Mission

“To enhance patient-centered care using innovation in technologies and treatments”

Why Participate

By learning how to be more safe and effective, we can help more families and children who need increasingly more complex surgeries. Our research in anesthesia has made these surgeries safer and more comfortable for children. Our research has led to improvements in:

- The types of medications that we use for anesthesia.
- The types of medications that we use for pain control.
- The types of equipment we use for monitoring our patients.
- Training for anesthesiologists.

Please visit our website www.part.cfri.ca for more information about our research team and current projects
